By D. F. Andrews, J. E. Stafford : Symbolic Computation for Statistical Inference (Oxford Statistical Science Series) many interesting links journals etc in discrete mathematics and related fields a time series is a series of data points indexed or listed or graphed in time order most commonly a time series is a sequence Symbolic Computation for Statistical Inference (Oxford Statistical Science Series):

24 of 24 review helpful good text on use of mathematical languages in stats By Michael R Chernick When I was a graduate student at Stanford I labored with tedious algebraic computations while trying to prove limit theorems for maxima of stationary sequences Often it would be very frustrating as I would spend hours checking calculations only to repeatedly make minor mistakes that would cause results not to match When prop Over recent years developments in statistical computing have freed statisticians from the burden of calculation and have made possible new methods of analysis that previously would have been too difficult or time consuming Up till now these developments have been primarily in numerical computation and graphical display but equal steps forward are now being made in the area of symbolic computing the use of computer languages and procedures to manipulate ex About the Author D F Andrews is at University of Toronto J E Stafford is at University of Toronto
