0 of 0 review helpful Solid text By Ricky I bought this for my masters Mathematical Economics class Very good book I could see this being advanced for beginners but if you have a relatively strong math back round anything above differential equations this is a very easy follow 0 of 0 review helpful helped a lot by giving me a good foundation in economic optimization before starting gra Building on a base of simple economic theory and elementary linear algebra and calculus this broad treatment of static and dynamic optimization methods discusses the importance of shadow prices and reviews functions defined by solutions of optimization problems Recently revised and expanded the second edition will be a valuable resource for upper level undergraduate and graduate students This excellent little gem of a book stresses exactly what students of economics need to learn about optimization Henry Thompson Auburn University Much improved from first edition Excellent text for sophisticated upperclassmen graduate studen
