By Yu-Chi Ho, Qian-Chuan Zhao, Qing-Shan Jia : Ordinal Optimization: Soft Optimization for Hard Problems (International Series on Discrete Event Dynamic Systems) wojciech czarnecki grzegorz swirszcz max jaderberg simon osindero oriol vinyals koray kavukcuoglu problems of the international imposition of economic sanctions mathematicaldynamic programming optimization hardsoft Ordinal Optimization: Soft Optimization for Hard Problems (International Series on Discrete Event Dynamic Systems):

2 of 2 review helpful The efficiency of ballpark By Keiichi Ito We usually seek a minimum maximum of a function in optimization In practice this is not an easily attained task The simulation that we have to run in order to get the objective value can be very time consuming and can be inaccurate The authors of this book tackled the difficulty by reformulating the optimization problem The authors have essen Performance evaluation of increasingly complex human made systems requires the use of simulation models However these systems are difficult to describe and capture by succinct mathematical models The purpose of this book is to address the difficulties of the optimization of complex systems via simulation models or other computation intensive models involving possible stochastic effects and discrete choices This book establishes distinct advantages of the softer From the reviews This book addresses the difficulties of optimization of complex systems via simulation models or computation intensive models involving possible stochastic effects and discrete choice The tools described here can be used separately or in
