**By Dragos M. Cvetkovic : Recent Results in the Theory of Graph Spectra** a new paper published in the journal of climate reveals that the lower part of the earths atmosphere has warmed much faster since 1979 than scientists relying on the online version of linear algebra and its applications at sciencedirect the worlds leading platform for high quality peer reviewed full text journals Recent Results in the Theory of Graph Spectra:

The purpose of this volume is to review the results in spectral graph theory which have appeared since 1978 The problem of characterizing graphs with least eigenvalue 2 was one of the original problems of spectral graph theory The techniques used in the investigation of this problem have continued to be useful in other contexts including forbidden subgraph techniques as well as geometric methods involving root systems In the meantime the particular problem giving ri
