**By Bair V Budaev : Diffraction by Wedges (Chapman & Hall/CRC Research Notes in Mathematics Series)**  
Diffraction by Wedges (Chapman & Hall/CRC Research Notes in Mathematics Series):

The problem of wave diffraction by wedge shaped structures is important in many applications including

electromagnetics acoustics and geophysics Numerous attempts to solve these problems have been made during the last 70 years using both analytical and numerical methods but this has proved to be very difficult only a few of the simplest problems of this type have been successfully solved The difficulties are caused by the nonseparability of variables and the singular From the Back Cover The problem of wave diffraction by wedge shaped structures is important in many applications including electromagnetics acoustics and geophysics Numerous attempts to solve these problems have been made during the last 70 years using both
