By Richard P. Brent, Paul Zimmermann : Modern Computer Arithmetic (Cambridge Monographs on Applied and Computational Mathematics)

various number theorists home pagesdepartmental listings complete listing a b c d e f g q q a href="mailto:mathematical logic is a subfield of mathematics exploring the applications of formal logic to mathematics it bears close connections to metamathematics the Modern Computer Arithmetic (Cambridge Monographs on Applied and Computational Mathematics):

8 of 8 review helpful Excellent BUT only for the right audience By Let s Compare Options Preptorial The authors try to bridge the razor s edge of too much detail and machine implementation at one extreme and too general a current algorithm approach at the other If you ve read Deschamps Hardware Implementation of Finite Field Arithmetic Electronic Engineering you have a good feel for the circuits that implement those Modern Computer Arithmetic focuses on arbitrary precision algorithms for efficiently performing arithmetic operations such as addition multiplication and division and their connections to topics such as modular arithmetic greatest common divisors the Fast Fourier Transform FFT and the computation of elementary and special functions Brent and Zimmermann present algorithms that are ready to implement in your favorite language while keeping a high level description Very few books do justice to material that is suitable for both professional software engineers and graduate students This book does just that without losing its focus or stressing one audience over the other Marlin Thomas Computing s
