By Derek Richards : Advanced Mathematical Methods with Maple 1 matlab tutorial to accompany partial differential equations analytical and numerical methods 2nd edition by mark s gockenbach siam 2010 matlab tutorial maxima is a symbolic computation platform that is free open source runs on windows linux and mac and covers a wide range of mathematical functions including 2 d Advanced Mathematical Methods with Maple:

1 of 1 review helpful Best purchase this year By Dr D Advanced Mathematical Methods with Maple by D Richards is the best book I have bought in a long while I have been using Maple for several years and am continually amazed at all the features that I keep discovering This text is a treasure trove of techniques in the use of Maple The text revisits all the customary topics in an advanced calculus or real analysis c The last five years have seen an immense growth in the use of symbolic computing and mathematical software packages such as Maple The first three chapters of this book provide a user friendly introduction to computer assisted algebra with Maple The rest of the book then develops these techniques and demonstrates the use of this technology for deriving approximate solutions to differential equations linear and nonlinear and integrals In each case the mathematical c The aspect of the book that I particularly liked followed from the background of the author who is not a physicist but an applied mathematician This background meant that a wider view of the material was presented than we might expect from a physicist For
