**By Dianne P. O'Leary : Scientific Computing with Case Studies** dec 19 2008  
scientific computing with case studies has 2 ratings and reviews this book is a practical guide to the numerical solution of linear and nonlinear equations a master carpenter does not need to know how her hammer was designed or what Newton's laws say about the force that the hammer applies but she Scientific Computing with Case Studies:

1 of 1 review helpful Lecture Notes By Michael Sorensen Seemed more like a collection of lecture notes than a

textbook It was lacking example problems and wasn't very clear in explanations 1 of 2 review helpful Great book Good content By Miguel S Good book The condition of the book was flawless but can't say the same for the content of the book itself Although the Learning through doing is the foundation of this book which allows readers to explore case studies as well as expository material The book provides a practical guide to the numerical solution of linear and nonlinear equations differential equations optimization problems and eigenvalue problems It treats standard problems and introduces important variants such as sparse systems differential algebraic equations constrained optimization Monte Carlo simulations and About the Author Dianne P O Leary is Professor of Computer Science at the University of Maryland College Park and also holds an appointment in the university's Institute for Advanced Computer Studies UMIACS and in the Applied Mathematics and Scientific
