By Yu. I. Manin : A Course in Mathematical Logic for Mathematicians (Graduate Texts in Mathematics) this site is intended as a resource for university students in the mathematical sciences books are recommended on the characteristics of modern mathematics in the article what is mathematics i have posited that mathematics arises A Course in Mathematical Logic for Mathematicians (Graduate Texts in Mathematics):

1 The first edition of this book was published in 1977 The text has been well received and is still used although it has been out of print for some time In the intervening three decades a lot of interesting things have happened to mathematical logic i Model theory has shown that insights acquired in the study of formal languages could be used fruitfully in solving old problems of conventional mathematics ii Mathematics has been and is moving with growing acceleration From the reviews of the second edition As one might expect from a graduate text on logic by a very distinguished algebraic geometer this book assumes no previous acquaintance with logic but proceeds at a high level of mathematical sophistication Chapters
