Generalized Linear Models for Categorical and Continuous Limited Dependent Variables is designed for graduate students and researchers in the behavioral social health and medical sciences It incorporates examples of truncated counts censored continuous variables and doubly bounded continuous variables such as percentages The book provides broad but unified coverage and the authors integrate the concepts and ideas shared across models hellip a very useful contribution for anyone who needs modern extensions of statistical modeling tools I was also impressed with the elegant way in which the authors went about the demanding task of explaining complex methods to readers Internatio
