**By Lajos Horváth, Piotr Kokoszka : Inference for Functional Data with Applications (Springer Series in Statistics)** amazon inference for functional data with applications springer series in statistics springer series in statistics volume 200 2012 inference for functional data with applications authors Inference for Functional Data with

Applications (Springer Series in Statistics):

This book presents recently developed statistical methods and theory required for the application of the tools of functional data analysis to problems arising in geosciences finance economics and biology It is concerned with inference based on second order statistics especially those related to the functional principal component analysis While it covers inference for independent and identically distributed functional data its distinguishing feature is an in dept From the reviews This is an attractive impressive and useful book which gives an effective account of statistical methods and theory used in functional data analysis as applied to problems arising in many fields including finance biological sciences p
