By Herman Aguinis PhD : Regression Analysis for Categorical Moderators (Methodology in the Social Sciences) a meta analysis is a statistical analysis that combines the results of multiple scientific studies the basic tenet behind meta analyses is that there is a common in mathematical modeling statistical modeling and experimental sciences there are dependent and independent variables the models or Regression Analysis for Categorical Moderators (Methodology in the Social Sciences):

0 of 0 review helpful Very helpful examples By Perpetual Student I searched far and wide for resources on moderated multiple regression analysis and there s not much out there This book is one of the few resources that gives clear examples and does a nice job providing the logic behind the methods Reading this book made it easier to understand some of the more complicated texts by other articles I only wish that Aguinis Does the stability of personality vary by gender or ethnicity Does a particular therapy work better to treat clients with one type of personality disorder than those with another Providing a solution to thorny problems such as these Aguinis shows readers how to better assess whether the relationship between two variables is moderated by group membership through the use of a statistical technique moderated multiple regression MMR Clearly written the book requ Aguinis has produced the most comprehensive single source treatment on the topic of why and how to conduct moderated regression analysis for categorical moderators The book presents very clear steps for how to test for moderators but is more than a coo
