Leonhard Euler: A Tricentennial Tribute:

This book primarily serves as a historical research monograph on the biographical sketch and career of Leonhard Euler and his major contributions to numerous areas in the mathematical and physical sciences. It contains fourteen chapters describing Euler's works on number theory, algebra, geometry, trigonometry, differential and integral calculus, analysis, infinite series, and infinite products, ordinary and elliptic integrals, and special functions, ordinary and partial differential equations. The notation is modern and the writing is for modern readers who want to know in brief what Euler did. For this audience, the work will be a welcome addition to a general mathematics library. Choice From the Inside Flap
