0 of 1 review helpful great reference book By Victor Nava Very in depth look at finite methods in finance First attempt to make it into a text book and it is almost there This is the third revised and extended edition of the classical introduction to the mathematics of finance based on stochastic models in discrete time In the first part of the book simple one period models are studied in the second part the idea of dynamic hedging of contingent claims is developed in a multiperiod framework Due to the strong appeal and wide use of this book it is now available as a textbook with exercises It will be of value for a broad community About the Author Hans Follmer Humboldt Universitat zu Berlin Germany Alexander Schied University of Mannheim Germany
