By Umberto Cherubini, Fabio Gobbi, Sabrina Mulinacci : Convolution Copula Econometrics (SpringerBriefs in Statistics) Convolution Copula Econometrics (SpringerBriefs in Statistics):

This book presents a novel approach to time series econometrics which studies the behavior of nonlinear stochastic

processes This approach allows for an arbitrary dependence structure in the increments and provides a generalization with respect to the standard linear independent increments assumption of classical time series models The book offers a solution to the problem of a general semiparametric approach which is given by a concept called C convolution convolut Idquo The goal of the book is to gather the main concepts of copula function theory that can be applied to the analysis of time series so called convolution based copulas and some new ideas linked to copulas such as estimation of copula based Markov proc
