In 1970 at the U of Colorado the author delivered a course of lectures on his famous generalization then just established relating to Roth's theorem on rational approximations to algebraic numbers. The present volume is an expanded and up-dated version of the original mimeographed notes on the course. As an introduction to the author's own remarkable achievements relating to the Thue-Siegel-Roth theory, the text can hardly be bettered and the tract can already be re-
