By Wojciech Rytter, Maxime Crochemore : Jewels of Stringology a palindrome is a word phrase number or other

sequence of characters which reads the same backward as forward such as madam or racecar sentence length Jewels of Stringology:

0 of 0 review helpful Great primer for often overlooked algorithms By Eugene Zaikonnikov String processing is bread and butter of good part of computer science but somehow it has been always shunned in the classic texts It has been wonderful to find a book dedicated solely to to the strings Much of the practical and theoretical issues of string handling are well covered e g suffix trees subword graphs cons The term ldquo stringology rdquo is a popular nickname for text algorithms or algorithms on strings This book deals with the most basic algorithms in the area Most of them can be viewed as ldquo algorithmic jewels rdquo and deserve reader friendly presentation One of the main aims of the book is to present several of the most celebrated algorithms in a simple way by omitting obscuring details and separating algorithmic structure from combinatorial theoretical bac nicely covers material from the famous KMP and BM algorithms to suffix trees
