By Yuichiro Kakihara : Abstract Methods in Information Theory (Series on Multivariate Analysis) the landmark event that established the discipline of information theory and brought it to immediate worldwide attention was the publication of Claude E. Shannon's revealing facts from data USA site this site offers information on statistical data analysis it describes time series analysis popular distributions and other Abstract Methods in Information Theory (Series on Multivariate Analysis):

Information Theory is studied from the following points of view 1 the theory of entropy as amount of information 2 the mathematical structure of information sources probability measures and 3 the theory of information channels Shannon entropy and Kolmogorov and Sinai entropy are defined and their basic properties are examined where the latter entropy is extended to be a linear functional on a certain set of measures Ergodic and mixing properties of stationary
